* $p < .05$, ** $p < .01$, *** $p < .001$ for Latina/os and blacks compared to whites, females compared to males, sexual minorities compared to heterosexuals, and welfare recipients compared to non-recipients.

^A Latina/os significantly differ from blacks ($p < .05$).

APPENDIX B. Odds Ratios for Depressive Symptoms and Self-Rated Health on Multiple Forms of Perceived Discrimination (N=1,052)

Overall Discrimination Frequency (9-16)				2.929 ^{***EFG} (1.9-4.6)				.225 ^{***EFGH} (0.1-0.4)

Note: Exponentiated coefficients are presented, with 95 percent confidence intervals in parentheses. * $p < .05$, ** $p < .01$, *** $p < .001$.

In Models 2 and 6, and Models 4 and 8, respondents who report no forms of discrimination are the reference category ($n=267$).

Controls include race/ethnicity, gender, sexual identity, welfare-recipient, age, and nativity.

^A Negative binomial regression odds ratios. ^B Ordinal logistic regression odds ratios. ^C Significantly differs from 1 form of discrimination. ^D Significantly differs from 2 forms of discrimination. ^E Significantly differs from a score of 1 on the overall discrimination frequency scale. ^F Significantly differs from a score of 2 on the overall discrimination frequency scale. ^G Significantly differs from scores of 3 and 4 on the overall discrimination frequency scale. ^H Significantly differs from scores between 5-8 on the overall discrimination frequency scale.
